Adverse Reactions

Allergies

Postings

No Patient Postings Found

In this example, tetracycline from the NDF Generic Drug Name file is selected. Notice that other files contain possible selections.

Other than for food reactants, it is a good idea to avoid selections from the Drug Ingredients File. Users should also avoid making selections from National Drug File – Trade Name. Several entries in this file include all inactive ingredients used in the manufacturing of the product. Thus, selecting items from this file could result in triggering useless and confusing order checks.

Allergy Reactant Lookup

Enter causative agent for Allergy or Adverse Drug Reaction:
(Enter at least 3 characters)

TET

Search

Select from one of the following items

[-] 81 matches found.

- [-] VA Allergies File (no matches)
- [-] **National Drug File - Generic Drug Name (7)**

Recent Immunizations Allergies / Adverse Reactions Postings

No Immunizations Found. No Allergy Assessment No Patient Postings Found.

When a possible match can not be found this message will display. Please try another spelling. If you are sure your entry is correct, click on 'Yes'.

Causative Agent Lookup

Enter causative agent for Allergy or Adverse Drug Reaction:

(Enter the FIRST FEW LETTERS of the causative agent (minimum of 3) to allow for a comprehensive search. Only one reactant may be entered at a time)

Search for:

No Known Allergies

Causative Agent Not On File - No Matches for ASPURIN

 The agent you typed was not found in the database. Consider the common causes of search failure:

- Misspellings
- Typing more than one agent in a single entry
- Typing "No known allergies"

Select "NO" to attempt the search again. Carefully check your spelling, try an alternate spelling, a trade name, a generic name or just entering the first few characters (minimum of 3). Enter only one allergy at a time. Use the "No Known Allergies" check box to mark a patient as NKA.

Select "YES" to send a bulletin to the allergy coordinator to request assistance. Only do this if you've tried alternate methods of finding the causative agent and have been unsuccessful.

Select "CANCEL" to abort this entry process.

Please enter any details that will assist in the entry of a request for a new reactant term.

Causative Agent Lookup

Enter causative agent for Allergy or Adverse Drug Reaction:

(Enter the FIRST FEW LETTERS of the causative agent (minimum of 3) to allow for a comprehensive search. Only one reactant may be entered at a time)

Search for:

aspirin

No Known Allergies

Enter Optional Comments

You may now add any comments you may have to the message that is going to be sent with the request to add this reactant.

You may want to add things like sign/symptoms, observed or historical, etc., that may be useful to the reviewer.

Already included are the entry you attempted, the patient you attempted to enter it for, and your name, title, and contact information.

Comments (optional):

Sending off this request does not create an ADR/ADE record! You may be contacted for more information.

Causative agent: TETRACYCLINE

Origination Date: Jun 2, 2006@11:31

Nature of Reaction:

Signs/Symptoms: ANXIETY, ITCHING OF EYE, LOW BLOOD PRESSURE, DROWSY, NAUSEA AND VOMITING, DIARRHEA, URTICARIA, DRY MOUTH, COUGH, RASH

Selected Symptoms:

Comments:

ID Band Marked

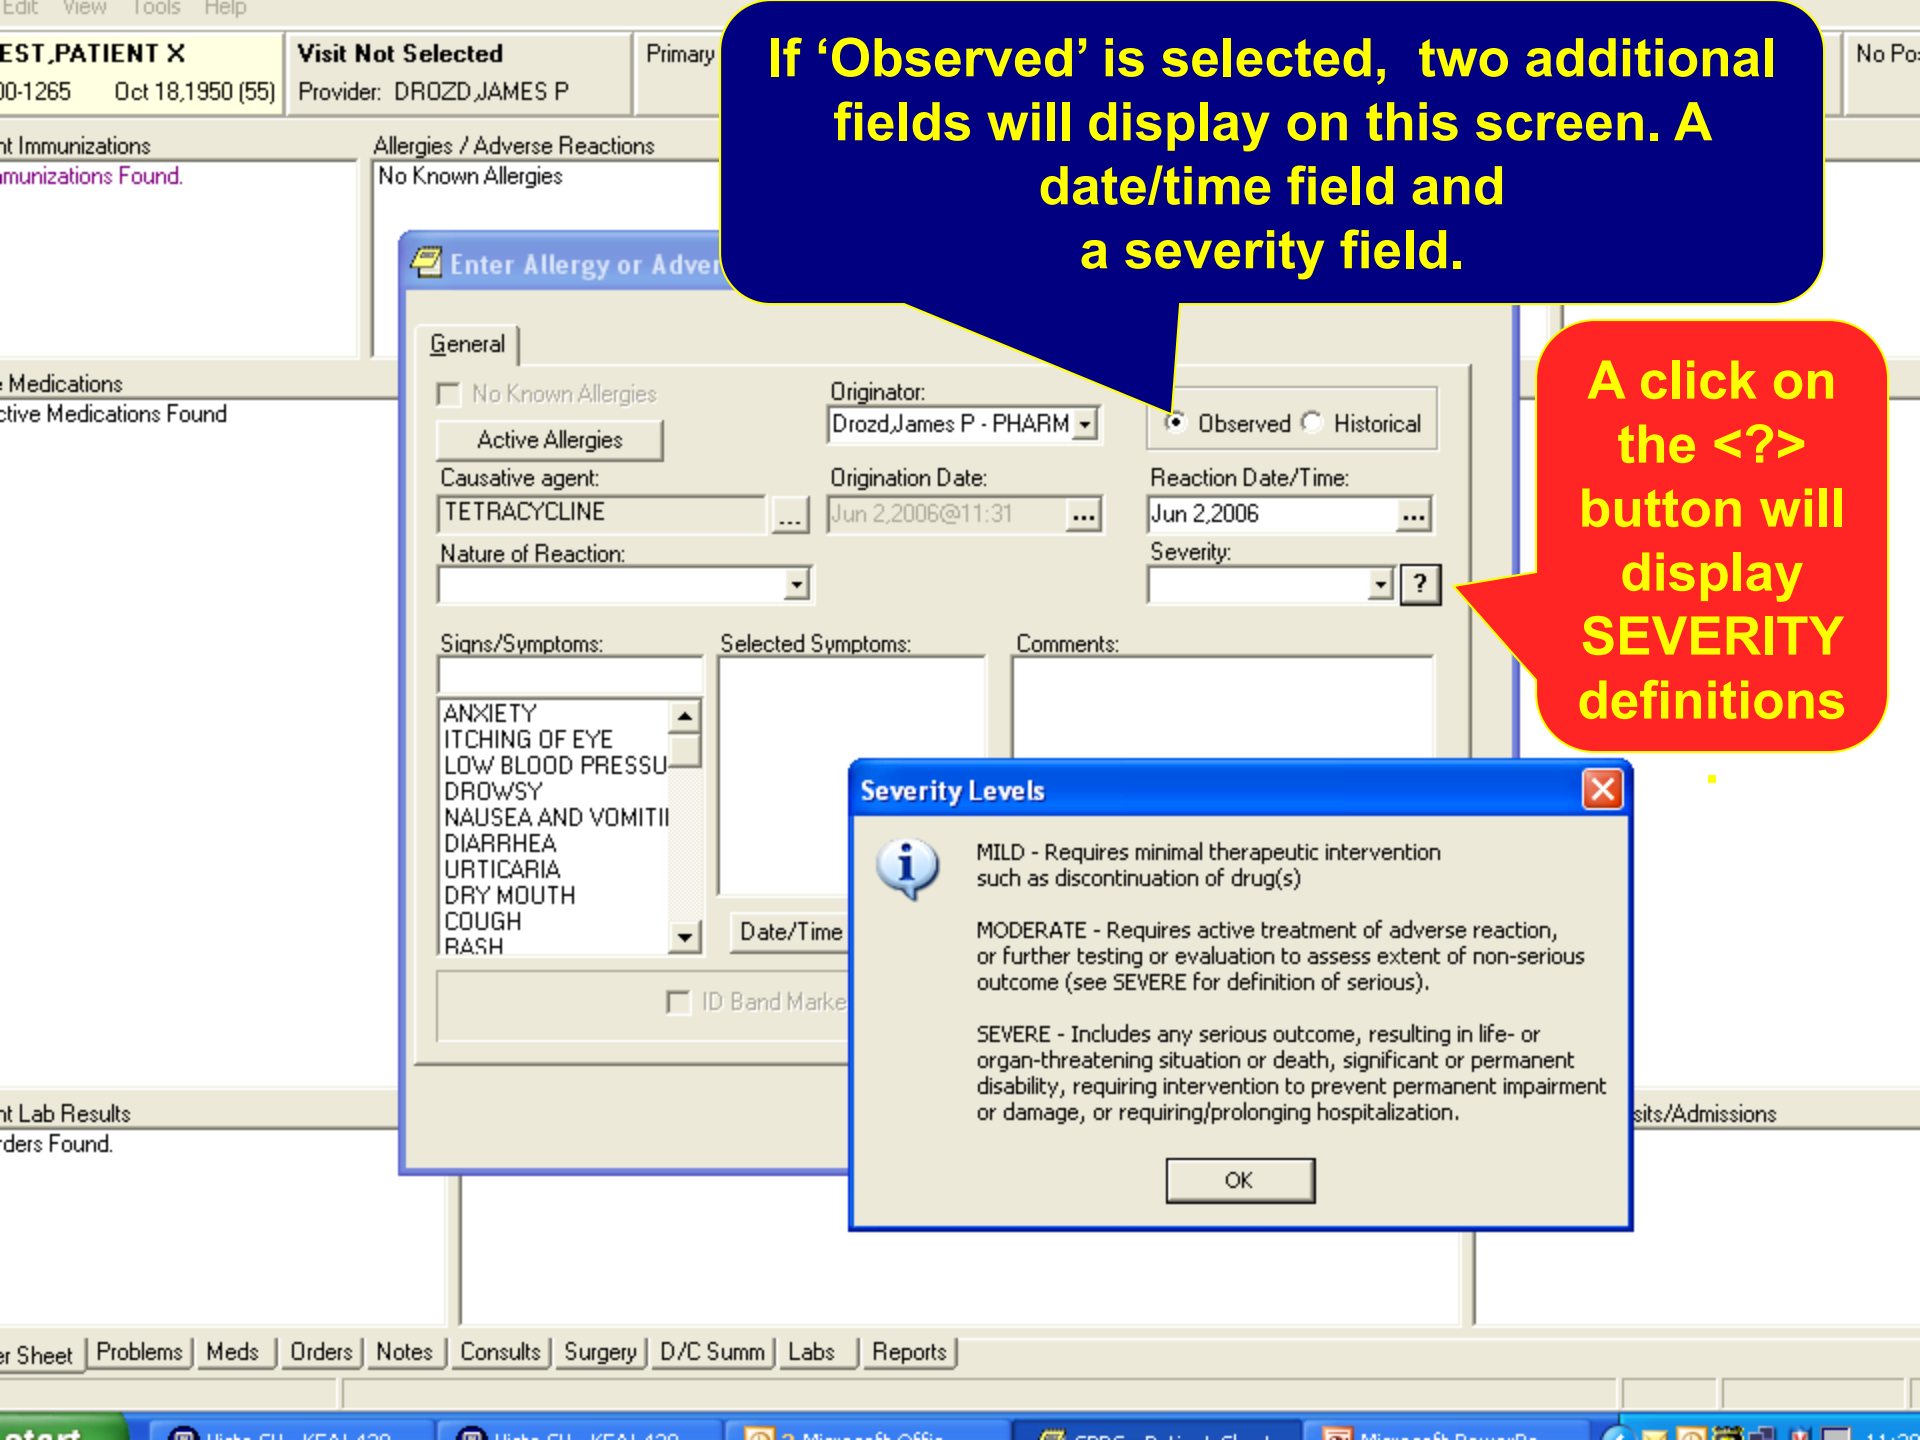

OBSERVED: directly observed or occurring while the patient was on the suspected causative agent. Use for new information about an allergy/adverse reaction and for recent reactions caused by VA-prescribed medications.

HISTORICAL: reported by the patient as occurring in the past; no longer requires intervention

A sign/symptom dialog screen will now open.

A reaction can be recorded as Observed or Historical.

The default type is Historical.

If 'Observed' is selected, two additional fields will display on this screen. A date/time field and a severity field.

A click on the <?> button will display SEVERITY definitions

Severity Levels

MILD - Requires minimal therapeutic intervention such as discontinuation of drug(s)

MODERATE - Requires active treatment of adverse reaction, or further testing or evaluation to assess extent of non-serious outcome (see SEVERE for definition of serious).

SEVERE - Includes any serious outcome, resulting in life- or organ-threatening situation or death, significant or permanent disability, requiring intervention to prevent permanent impairment or damage, or requiring/prolonging hospitalization.

When a reactant record is entered, it will also be indicated in the 'Postings' box

Because the signs/symptoms field is not required for "Historical" reactions, it is very helpful to select a symptom or note the adverse outcome in the Comments Field (see slides 9 and 10) so other providers will have that information.

Alerted Note

Apr 23,06 Adverse React/Allergy, JAMES P DROZD

TITLE: Adverse React/Allergy

DATE OF NOTE: JUN 30, 2006@12:27:20 ENTRY DATE: JUN 30, 2006@12:27:22

AUTHOR: DOCTOR-V,CPRS EXP COSIGNER:

URGENCY: STATUS: COMPLETED

This patient has had an adverse reaction reported for TETRACYCLINE entered in error on Jun 30, 2006@12:27:20.

Author's comments:

patient now recalls he was not taking tetracycline when he got the sunburn

/es/ CPRS DOCTOR-V

Signed: 06/30/2006 12:30

Marking a reactant record as "ENTERED IN ERROR" generates a note in the clinical record. This is done for both "HISTORICAL" and "OBSERVED" reactions.
